VERTILIGNE

PRODUCT BENEFITS

The Vertiligne vertical cable system is a flexible personal fall protection solution designed to secure vertical access routes. Its dedicated trolley can be connected at any point on the cable.

Versatility

Can be installed on a wide range of vertical structures

Durability

Made of stainless steel for excellent corrosion resistance

Easy

ease of use

Easy to install, even when wearing gloves

Safety

Tension indicator for optimum cable adjustment
Load capacity: 125kg maximum (including user & tools)

Practicality

Can be used simultaneously: 3 users 3 metres apart
The trolley can be connected at any point on the cable

Distributed by

Vertical cable system

VERTILIGNE

PRESENTATION

Vertiligne is a flexible vertical system for securing vertical movements on ladders, masts or pylons.

TECHNICAL SPECIFICATIONS

REMINDER OF STANDARDS

Only when it is technically impossible to provide collective protection can individual protection against falls from height be considered (French Labour Code R4323-61).

Personal protective equipment can also be used as a complement to collective protection. The use of this type of protection imposes organisational constraints, in particular:

- defining, installing and choosing the type of equipment (lifeline, anchorage point, etc.),
- work with at least two people,
- definition of an emergency response plan,
- installation and use instructions,
- staff information and training,
- periodic inspections,
- weather conditions.

As a reminder, extract from recommendation R430 - INRS/CNAMTS :

For buildings to be constructed of any kind, technical provisions to facilitate the prevention of falls from height during subsequent work on the building must be provided for at the design stage.

The ground of technical impossibility cannot therefore be accepted, as it is now up to the project owner to modify his project so that no situation remains that cannot be properly resolved, at least, by the implementation of collective protection.

Description: **Guided type fall arrester CMBV**
 Non opening guided type fall arrester, in stainless steel 316L, with four guiding wheels. Energy absorber reference 710087 integrated in the fall arrester by a shackle in stainless steel AISI304. Energy absorber in polyester webbing protected by a thermoretractable sheet, length 150mm, with a connector with a captive pin reference 710053.
Vertical rigid anchorage line VERTILIGNE
 Wire rope in stainless steel 316, C18, 7x7 of diameter 8mm. The lower end are equipped with a bracket, EVB3, and the upper end are equipped with a bracket ES-2. Fixing bracket by intermediate anchor, either mobile anchor, IMV or fix anchor, IFV.
 Maximum span 8m. Orientation of use: vertical with a sideways leaning angle from 0° to 15°. Minimum rated load of 50kg and maximum rated load of 150kg.
 Equipement also tested according the requirements of VG11 RfU 11.116:2018, for use with a front leaning angle up to 45°, and according VG11 RfU 11.119:2018 for use by 3 persons (detailed description in EU type examination report 19.0225).

Description : **Antichute mobile CMBV**
 Antichute mobile, non ouvrable, en acier inoxydable 316L, avec quatre roulettes de guidage. Absorbent d'énergie référence 710087 intégré à l'antichute par une manille en acier inoxydable AISI304. Absorbent en sangle polyester, protégé par une gaine thermoretractable, longueur 150 mm, et équipé d'un connecteur avec une barrette référence 710053.
Support d'assurage rigide VERTILIGNE
 Câble en acier inoxydable 316, C18, 7x7 de diamètre 8mm. L'extrémité basse est équipée d'une butée référence EVB3 et l'extrémité haute est équipée de la butée ES-2. Fixation du câble par des pièces intermédiaires, soit mobile, IMV ou fixe, IFV.
 Portée maximale 8 m. Orientation d'utilisation : avec un angle d'inclinaison latéral de 0° à 15°. Charge nominale minimale 50 kg et charge nominale maximale 150 kg.
 Equipement également testé selon les exigences de la fiche VG11 RfU 11.116:2018 pour une utilisation avec un angle d'inclinaison avant jusqu'à 45°, et suivant la fiche RfU11.119:2018, pour une utilisation par 3 personnes (description détaillée dans le rapport d'examen UE de type 19.0225).

VERTILIGNE

INFORMATION

The system is certified for use on all rigid Delta Plus Systems structures, aluminium or steel ladders with a minimum strength of 12kN and which do not deviate from the Delta Plus Systems by more than 15° laterally and 45° forwards. Any other use is prohibited and may be dangerous.

These instructions are intended for users of the WVCMBV fall arrester and its VERTILIGNE support. It must be read and understood by each person before using the product. If you have any doubts or problems of understanding, or if a problem arises which is not covered in this document, please contact your Delta Plus Systems representative or the Delta Plus Systems technical department directly. This manual must always be available and accessible to the user. It is essential for the user's safety that, if the product is resold outside the first country of destination (France), the reseller supply the instructions for use, maintenance, periodic inspections and repairs, written in the language of the country where the product is to be used. Any activity at height is dangerous and may cause accidents, serious injury or death. You are responsible for practising and learning the techniques for using the appropriate equipment. Before using the product, you must therefore read and understand all the information contained in the instruction manual. Failure to heed any of these warnings could result in serious injury or death. For safety reasons, the user must be in good health and not under the influence of medication, alcohol or drugs. Workers using personal protective equipment must be properly trained and competent.

Instructions for use

& technical description

The E.P.I. consists of a mobile fall arrester, reference WVCMBV, and a Delta Plus Systems Ø8 stainless steel cable belay support, reference VERTILIGNE. The product is certified to EN 353-1: 2014 + A1: 2017.

The temperature of the working environment must be above -30°C.

This device is used to move and protect against falls from height, both upwards and downwards.

The VERTILIGNE belay support must only be used with the WVCMBV mobile carriage. The user must connect his harness via the sternal attachment point to the carriage using the connector integrated into the WVCMBV, in compliance with EN 362.

The connection incorporates a textile energy absorber to limit the impact force in the event of a fall. CAUTION The length of the connection element must not be lengthened or shortened, for example by adding or removing a connector.

The truck can be connected and disconnected at any point in the system. These actions must be carried out in a safe position, or using a separate personal protection system.

Present the carriage in the correct direction of use (a). If the carriage is not oriented correctly, a coding device prevents it from opening (b). Swivel the lower cam to make room for the cable. The absorber must be pointing downwards to allow full opening (c) Engage the carriage on the cable and release the action on the cam (d). Swivel the upper cam (e) Fully engage the carriage on the cable and release the cam (f) Check that the carriage is moving correctly on the cable (g). Pull the connector downwards and ensure that the carriage is locked (h).

The trolley has been designed to move freely over the cable without manual intervention.

Distributed by

Vertical cable system

VERTILIGNE

Holding the locking mechanism or handling the trolley while moving may prevent it from locking in the event of a fall. Do not hold the trolley.

The minimum distance under the user's feet is 2 metres. During the first 2 metres, the user may not be protected against falling to the ground, so extra precautions should be taken when ascending or descending.

The truck is designed to be used by a single person weighing a minimum of 50 kg (excluding tools and equipment) and a maximum of 125 kg (including tools and equipment).

The belay device is designed to be used by three people simultaneously, each of whom must have their own WVCMBV fall arrester and must maintain a minimum safety distance of 3 metres between them. Warning: each user may be influenced and fall due to the movement of the belay device initiated by the other users.

There is no limit to the length of the rope grab. All points on the rigid belay support at which the mobile fall arrester could come out of the rigid belay support must be fitted with a stop, reference WVEVB3.

Protect it from shocks, humidity and excessive temperatures (+10°C / +40°C) during transport and storage.

Rigid belay devices may not be used in rescue situations. Operations must be carried out using a separate personal protection system.

Important - Prevention Before use

At height, your life depends on the equipment used. Any doubts about the safety of the device should be reported to the manufacturer and to the person responsible for the installation.

A fall arrest harness complying with EN 361 is the only body-gripping device permitted for use in a fall arrest system. A harness must be size-appropriate, correctly adjusted and fitted to the user's body size.

The fall arrest harness should be properly adjusted to ensure a snug fit and should not be used if it is loose. If the harness loosens during ascent or descent, it should be readjusted correctly from a safe position.

The durability of the substrate must be checked in accordance with its use.

Make sure the cable is properly tensioned by checking that the tension indicator is visible, which guarantees a value of 50 DaN.

The product must not be used beyond its limits, or in any other unforeseen situation.

A rescue plan must be put in place to deal with any emergencies that may arise during work.

In a fall arrest system, it is essential to check the clearance under the user before and during use, to avoid any collision with the ground or an obstacle during the fall.

In the VERTILIGNE system, this space must be at least 2 m. During the first 2 metres, the user may not be protected against falling to the ground, so extra precautions should be taken when ascending or descending.

The trolley must not be used in the working position. If it is necessary to hold the trolley in the working position, a separate system must be used.

A hazard may arise when using several pieces of equipment in which the safety function of one piece of equipment may be affected by the safety function of the other piece of equipment.

Distributed by

Vertical cable system

VERTILIGNE

ATTENTION DANGER: please ensure that your equipment does not rub against abrasive materials or sharp parts that could damage its integrity, particularly the textile energy absorber.

As the trolley is supplied with its own connector, it is not possible to change the components independently.

Use only Delta Plus Systems parts to ensure compatibility when assembling the VERTILIGNE system.

The fall prevention function only works in one direction. It is essential to observe the direction of installation (arrow on trolley label pointing upwards).

Mobile fall arresters including a rigid stainless steel anchor support should not be installed in highly corrosive atmospheres (e.g. above a swimming pool) due to the risk of invisible stress corrosion cracking, unless specific control measures are implemented or compatibility is established.

Control - Points to check

Check that the instructions for using the lifeline are clearly displayed on the panel provided.

Check that the fall arrest system you have complies with and is compatible with those recommended for use with the VERTILIGNE lifeline.

Make sure that the product markings are legible.

Check that periodic checks and maintenance of the lifeline are up to date.

Carry out a visual and functional check of the entire lifeline. Use the VERTILIGNE system identification and verification sheet to carry out these checks.

After a fall, do not use the belay system or trolley again until they have been checked and brought back into compliance by a competent person authorised by the manufacturer.

Carry out a visual and functional check of the entire lifeline. Use the VERTILIGNE system identification and verification sheet to carry out these checks.

After a fall, do not use the belay system or trolley again until they have been checked and brought back into compliance by a competent person authorised by the manufacturer.

Service life - Disposal

For Delta Plus Systems textile products, the maximum service life is 10 years from the date of manufacture. There is no limit for metal products. For Delta Plus Systems plastic products: disposal after 10 years, with the exception of ABS55, as long as an annual inspection is carried out.

CAUTION, an exceptional event may lead you to reject a product after a single use (type and intensity of use, environment of use: aggressive environments, marine environment, sharp edges, extreme temperatures, chemicals, etc.).

A product must be scrapped when :

- ▶ It is over 10 years old and made of plastic or textile.
- ▶ He has suffered a serious fall (or strain).
- ▶ The result of the product checks is not satisfactory.
- ▶ You have doubts about its reliability.
- ▶ You don't know its full history of use.
- ▶ Its use is obsolete (changes in legislation, standards, technology or incompatibility with other equipment, etc.).

VERTILIGNE

Destroy these products to prevent future use.

System warranty

Products are guaranteed against any material or manufacturing defect for a period of 10 years from the date of delivery in the case of metal parts, and for 2 years in the case of other parts (textile, plastic, electrical and electronic components, etc.). Interventions under the warranty shall not have the effect of extending the warranty period.

The presentation of the receipted invoice will be strictly required when the guarantee is invoked.

Under this warranty, the only obligation incumbent on Delta Plus Systems shall be the free replacement or repair of the product or component recognised as defective by its services. In order to benefit from the warranty, any product must first be submitted to the after-sales service of Delta Plus Systems, whose agreement is indispensable for any replacement. Any carriage and/or on-site replacement costs shall be borne by the purchaser.

Maintenance and servicing

Any modification or addition to the equipment without the prior written consent of the manufacturer is prohibited.

Any repairs to system components must be carried out in accordance with Delta Plus Systems procedures. If in doubt about the condition of the product, replace it with an original Delta Plus Systems part.

A soiled product must be washed and rinsed with clean water, then dried. It must not be brought into contact with corrosive or aggressive materials, or stored at extreme temperatures.

All chemical products and solvents may alter the resistance of the system components. If the product is likely to come into contact with these products, please let us know the exact name of the chemical components and we will reply after an appropriate study.

The condition of PPE must be checked at least every 12 months by an authorised and competent person in strict compliance with Delta Plus Systems' operating procedures. These periodic and regular examinations are necessary because the safety of the user is linked to maintaining the effectiveness and resistance of the equipment.

The inspection and the results must be recorded in writing in a maintenance log using the identification and inspection sheet supplied by Delta Plus Systems.

Delta Plus Systems can also help you check, inspect and maintain your permanent fall arrest and PPE safety systems. You can also ensure that your teams are fully conversant with the use of these fall arrest solutions and the basic concepts they need to know to work safely at height, by offering them comprehensive, customised training courses run by our training centre.
